Feather-Fur™ PS Lightweight *Peel & Stick* Furring Strips

Versatile and Innovative Furring-Strip Designed to Optimize Moisture Management and Airflow

FEATURES/BENEFITS

Description

Feather-Fur™ PS is a versatile and innovative furring strip designed to optimize moisture management and airflow behind various types of siding. The addition of a peel-and-stick backing allows for a fastenerless installation, making it quicker and easier to apply, while still providing the same excellent moisture protection and ventilation benefits.

Feather-Fur™ PS has an advanced design that ensures that water is effectively channeled away from the structure while promoting airflow, ultimately enhancing the durability of the exterior cladding system. The peel-and-stick backing simplifies installation by allowing installers to "fur as they go," saving time and labor costs.

Benefits

- **Fastenerless Install:** The Peel & Stick backing allows for a quicker, cleaner installation without the need for additional fasteners
- **Fur as You Go:** Enables easy "fur as you go" installation, allowing faster install
- **Moisture Management:** Effectively channels water away, reducing the risk of moisture-related issues.
- **Enhanced Airflow:** Promotes ventilation behind the siding, preventing mold and mildew.
- **Durable Construction:** Resistant to warping, rotting, and degradation over time.
- **Easy Installation:** Lightweight allowing for quick and straightforward application.

Applications

Fiber Cement • Metal • Wood • Vinyl
and Structural Insulated Panels (SIPS)

Ease of Installation

The installation of **Feather-Fur™ PS** from Keene Building Products is straightforward and involves securing it over a properly prepared wall with building paper or WRB, ensuring structural soundness, and allowing moisture to escape. **Feather-Fur™ PS** is applied over OSB or plywood, aligned with wall studs at 16" on center. It is peeled and stuck onto the WRB, with only enough applied each day to be covered by siding.

Additional **Feather-Fur™ PS** is used behind window and corner trims to provide venting and protection. At the base and top of the wall, **Feather-Fur™ PS** serves as a screen for venting and deterring insects, with a second layer applied at the base to ensure proper slope for lap siding. Following the manufacturer's guidelines and local building codes ensures a smooth installation process.

Technical Details

2" Wide x 4' Long x 3/8" Thick (10mm) per Unit
48 Units per Bundle
56 Bundles per Pallet
